

20200929 – Press Release for MeetMo.io V1.5

FOR IMMEDIATE RELEASE

Headline: Cloud-Based Collaboration Tool Connects Top Leaders in Media and Entertainment

Subheading: New collaboration platform, MeetMo.io, being utilized to hear from industry leaders and shapers from around the world

Los Angeles, CA– September 30th, 2020 – A new versatile collaboration cloud-based platform, MeetMo.io, is taking center stage in a series of virtual conferences to connect leaders in the media and entertainment industries.

On September 17th through October 8th, 2020 radiant has partnered with The Advanced Imaging Society to create a LIVE Remote Virtual Conference connecting some of the worlds thought leaders in media and entertainment, who are exploring and creating solutions for the human experience. Each of these virtual conferences and presentations will be utilizing the MeetMo.io system.

The Live Remote Virtual Conference will be hosted by Buzz Hays of Global Lead Entertainment, Google Cloud. Speakers include entertainment and media industry leaders such as Vicki Dobbs Beck, Executive in Charge of Industrial Light & Magic XLab; Eric Iverson, CTO, Amazon Web Services; Jenni Ogden, New Media Council Chair, Producers Guild of America; Gary Radburn Director of Virtually eVeRything at Dell; Sam Nicholson, A.S.C, CEO of Stargate Studios; Rob Goldheim, Group VP, Production Engineering; and Wayne Caffry, SCP at Post-Production Discovery Communications.

The presenters will be discussing returning back to production safely and exploring new tools and more effective methods that will be utilized well beyond the current pandemic. These solutions are currently being piloted and implemented from very small to large productions around the globe.

The MeetMo.io platform bridges the creative and tech by creating a seamless connectivity of devices such as cameras, lights, and sound to anybody, anywhere, anytime, at the highest resolution and lowest latency.

“As the film and television industry slowly gets back to work, production companies are more than ever looking to keep essential cast and crew safe and far more effective,” states Michael Mansouri, CEO of MeetMo.io “Our MeetMo platform enables remote production by connecting production personnel with film and TV production-based devices such as lights, audio, communication, motion picture cameras, and consumer cameras.”

“The MeetMo platform is currently utilized in the motion picture, healthcare, education, virtual LIVE events, and any industry that demands the highest quality video, audio, and connectivity with the lowest latency.”

More information about the MeetMo platform can be found at www.MeetMo.io

About MeetMo: MeetMo.io is a versatile collaboration cloud-based platform designed to connect people and the Internet of things [IoT], including cameras, lights, microphone, software and devices; literally anything with a video signal output; to anyone, anywhere, at any scale.
